

Safety Note58

Permit to Work for Laboratories and Workshops

Introduction

The 'Laboratories and Workshops Permit to Work' system is intended for use by those in charge of laboratories to control routine access to their areas by maintenance and cleaning (initially E&F staff and contractors). It identifies hazards and risks in the laboratory/workshop and confirms the precautions to be taken to deal with residual risk. A separate permit to work system is in place for "Hot Works".

Procedure for issuing a permit to work for laboratory or workshops

- A Permit to Work must be issued by the person responsible for the laboratory or other authorised person who has the necessary knowledge and experience to recognise the risks and the required control measures:
 - o For example the laboratory manager, Project Supervisor, technician, Area Health and Safety Coordinator or Building Support Officer
- x The form must specify the hazards present in the area of the works and what has been done to make this safe for work to be carried out. Typically this may include:
 - o Suspension of work involving hazardous material for the duration of works;
 - o Removal of hazardous materials from the immediate area of the works (e.g. clearing shelves of chemical bottles, moving liquid nitrogen dewars etc);
 - o Decontaminating areas and equipment. For biological material this would involve use of an appropriate disinfection. For areas used for handling chemicals wiping down surfaces with a damp cloth may be sufficient (dependent on chemicals used in that area, see Area Risk Assessments);
 - o Relocation of sharps, sharps bins, waste bins etc from immediate vicinity;
 - o Switching off hazardous equipment
 - o Where necessary, use of personal protective equipment may be specified
 - o Any other precautions that the E&F staff/contractors must follow.
- x Once issued, the permit to work should then be accepted by the person conducting the work.
- x If the permit is issued to external contractors, additional local information or supervision may be required.
- x The permit should be displayed in the area where the works are being carried out to notify users that the permit is in place and the conditions of the permit (e.g. no work with hazardous material in room during works).

period of two years).

PERMIT TO WORK FOR LABORATORIES AND WORKSHOPS

This permit is required for all maintenance, servicing and ~~not~~ routine cleaning work in the University laboratories and workshops. The permit must be issued by the person responsible for the area or a designated individual who has adequate knowledge of the area where work is to be performed and will be retained on file for a minimum of two years.
